

Report of confirmation of total ozone value in Umkehr data  
for WOUDC depositing

Tsukuba, Japan

December 25, 2008

Prepared by:

Koji Miyagawa

Head, the Regional Dobson Calibration Centre - Asia

Aerological Observatory / Japan Meteorological Agency

Email: [miyagawa@met.kishou.go.jp](mailto:miyagawa@met.kishou.go.jp)

## 1. Objective

These are confirmation reports of the total ozone value in the Umkehr data reevaluation for WOUDC depositing.

## 2. Comparison data

### 2.1 Total ozone values in Umkehr data.

Umk; These are the same as total ozone value in the original Umkehr data currently deposited at the WOUDC website. As for these total ozones, the observed value of Mu2.5 is usually used. Therefore, total ozone value differs from WOUDC archive.

### 2.2 Total ozone data

woudc; Representative value of day (same as the value of WOUDC depositing).

Mu2.5; Observed value of Mu2.5 (or Mu1.5, NOON).

## 3. Result

As for the total ozone of Umkehr observation, the value of Mu2.5 has been used since the observation start. The comparison result of each station showed good coincidence for newest total ozone archive. The comparison result by representative value is in +/-5% of scattering range almost.

$$\%(\text{Umk-woudc})=(\text{Umk-woudc})/\text{woudc} * 100$$

$$\%(\text{Umk-Mu2.5})=(\text{Umk}-\text{Mu2.5})/\text{Mu2.5} * 100$$
